

Meeting Minutes

Team 5 - Sprint 4 | Sprint 4 Internal Review

Date	11 July 2026	Time	2:00 PM-3:00 PM
Method	Internal team review	Chair	Li Hourui
Minute owner	Shi Zhengqi	Apologies	None recorded

Attendees

Li Hourui - PM / Scrum Master / Review Lead | Shi Zhengqi - DPM / Requirements and Documentation | Du Kun - HCI / UI Designer | Zhou Yaoyin - AI / Algorithm / Privacy Lead | Jin Zihan - ERD / UAT / Backend Documentation

Agenda

- Confirm Sprint 3/4 scope updates
- Align Home, Check-in, Events and Friends
- Review recommendation order
- Check AI/privacy, UAT, ERD and Notion evidence

Meeting Notes

- The team confirmed that Group remains out of scope and prioritised Home, Check-in, Events and Friends visibility.
- Home includes People You May Want to Know. Recommendations use permitted interests, approximate region and shared event interest.
- The friend-request flow requires consent before a friendship exists. Friend activity and event participant details must respect visibility settings.
- AI context and Check-in support use only consent-based data, with no mental-health inference or private-data leakage.
- Weather remains a supporting mock/fallback and must not block core functions.

Decisions

- Exact module terminology must match across prototype, requirements, UAT, ERD and Notion.
- Aggregate counts are used when user identities are not visible.
- Expanded friend search, blocking and group visibility remain future work.

Action Items

Action	Owner	Due date
Complete final PM review and Notion status check	Li Hourui	13 July 2026
Finalise requirements updates	Shi Zhengqi	13 July 2026
Submit revised HCI/prototype screens	Du Kun	13 July 2026
Submit AI/task-output package	Zhou Yaoyin	13 July 2026
Submit UAT scenarios and ERD	Jin Zihan	13 July 2026

Parking Lot / Follow-up Questions

- Final wording for Going versus external booking
- Whether weather remains mock-only
- Long-term AI consent audit and deletion

Record status: approved working minutes compiled from the project records. Unconfirmed Sponsor decisions are not presented as approved outcomes.
