Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 21/05/2026 - 14:00

MEETING NOTES • The Sponsor introduced the project context, expected deliverables, review process, and the need to keep contribution evidence and current links in Notion or a similar shared workspace. • The initial problem was framed as helping people share day-to-day status, discover relevant events, and connect with others who have similar interests without exposing unnecessary personal information. • The team identified students, newcomers, and community members seeking lightweight social connection as possible users. The final target-user wording remained subject to later Sponsor review. • Initial functional ideas included account access, user profiles, Check-in, friend activity, event discovery, recommendations, and an AI-supported assistant experience. • The team separated functional ideas from non-functional requirements covering privacy, consent, accessibility, usability, responsiveness, maintainability, and safe handling of personal data. • Li Hourui was assigned PM / Scrum coordination and integration work; Shi Zhengqi became DPM and documentation support; Du Kun took UI/HCI; Zhou Yaoyin took AI, algorithms, and privacy; Jin Zihan took ERD, UAT, and backend documentation. • Agile / Scrum was selected because the broad first idea needed short cycles of clarification, prototype review, Sponsor feedback, and cross-document correction. • The team agreed that early ideas must be recorded as proposed rather than approved until they are confirmed in a Sponsor meeting or a reviewed project document. • Each owner must maintain a current file, completion status, and evidence of work so later reports do not rely on untracked copies or unsupported contribution claims. • The first internal meeting will consolidate the workshop output, remove repetition, identify risks, and prepare focused Sponsor questions rather than presenting the initial idea as a frozen scope.	AGENDA (and priority) 1. Introduce the Sponsor, team members, roles, and communication approach (1) 2. Clarify the project problem, intended users, and expected value (1) 3. Discuss the initial account, profile, check-in, event, friend, and AI ideas (1) 4. Separate functional requirements from non-functional requirements (1) 5. Discuss privacy, consent, usability, maintainability, and safety expectations (1) 6. Confirm Agile / Scrum working method and evidence storage (2) 7. Assign first research, requirements, UI, AI/privacy, and data tasks (2) 8. Confirm the first internal consolidation meeting and open questions (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 14:00) • Du Kun - HCI / UI Designer (approx. 14:00) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 14:00) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 14:00)
PARKING LOT • Confirm the final application name. • Confirm the final target-user wording. • Decide which early social functions are core or future work. • Confirm exact AI capability and allowed data sources. • Confirm event-registration responsibility. • Record Sponsor communication and review cadence in Notion.	ACTION ITEMS (Owner and deadline) • Consolidate workshop notes and first proposal. (Li Hourui 29 May 2026) • Structure initial requirements and Sprint records. (Shi Zhengqi 29 May 2026) • Draft initial page structure and user flows. (Du Kun 3 June 2026) • Research AI boundaries and privacy needs. (Zhou Yaoyin 3 June 2026) • Identify core entities and login/data needs. (Jin Zihan 3 June 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 3 June 2026)	

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 29/05/2026 - 14:00

MEETING NOTES • Li Hourui presented the consolidated workshop notes and first proposal draft. The team found repeated feature descriptions and several statements that sounded approved even though they were still assumptions. • Shi Zhengqi grouped the draft into account/profile, Check-in, Events, Friends, recommendations, AI Assistant, privacy, and supporting non-functional requirements. • Du Kun translated the main journey into early page sections for Login, Home, Check-in, Event Details, Friends, and Profile so unclear functional wording could be tested against a visible flow. • The team noted that the broad social concept could create scope risk if chat, groups, advanced moderation, booking, recommendations, and AI were all treated as full modules. • Zhou Yaoyin recorded that AI personalisation requires explicit consent, a defined list of permitted inputs, user control, and a clear statement of what the assistant must not infer. • Jin Zihan proposed User, Profile, CheckIn, Event, and relationship records as starting entities, while noting that event state and friendship rules still required Sponsor decisions. • The team prepared a question on whether event registration and payment occur inside the app or on an external website, because the answer affects UI, ERD, UAT, and scope. • A separate question was prepared on ordinary user-to-user chat and whether it is essential to the core problem or should be deferred. • File names and version labels must identify the owner and status. Notion links must point to the current version rather than multiple inconsistent drafts. • The 5 June Sponsor review will present the structured draft, list assumptions openly, and request decisions on scope, AI boundaries, privacy, and external dependencies.	AGENDA (and priority) 1. Review the integrated Sponsor-workshop notes and first proposal draft (1) 2. Remove duplicated, unclear, and overly broad requirements (1) 3. Group requirements into account, check-in, events, friends, and AI areas (1) 4. Review the first user journey and page-structure sketches (1) 5. Identify AI-consent and permitted-input questions (1) 6. Review the first User, Profile, Check-in, Event, and relationship entities (2) 7. Confirm document ownership, naming, and Notion evidence expectations (2) 8. Prepare exact questions for the 5 June Sponsor review (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 14:00) • Du Kun - HCI / UI Designer (approx. 14:00) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 14:00) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 14:00)
PARKING LOT • Is ordinary user-to-user chat required? • Does event registration occur inside the app or externally? • Which profile and activity fields may AI read? • Which privacy options are required for Check-in? • Which recommendation factors are acceptable? • Confirm the first prototype-review date.	ACTION ITEMS (Owner and deadline) • Finalise the review deck and Sponsor questions. (Li Hourui 4 June 2026) • Clean headings and remove duplicated requirements. (Shi Zhengqi 4 June 2026) • Prepare initial page-flow sketches. (Du Kun 4 June 2026) • Prepare AI/privacy boundary notes. (Zhou Yaoyin 4 June 2026) • Prepare entity and login questions. (Jin Zihan 4 June 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 4 June 2026)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 05/06/2026 - 11:30

MEETING NOTES • Li Hourui presented the structured proposal and explained that the initial workshop produced a broad set of social, event, Check-in, and AI ideas that now required prioritisation. • The Sponsor asked the team to focus on functions that could be specified, prototyped, tested, and documented within the available project period. • Ordinary user-to-user chat was removed from the current scope because it was not necessary to demonstrate the main Check-in, event, friendship, and recommendation experience. • The AI Assistant remains a bounded supporting feature. It must not become an unlimited social, counselling, diagnostic, or mental-health inference system. • The project must explain how Check-in information can support friend activity, event discovery, recommendations, and permitted AI context instead of presenting unrelated modules. • The Sponsor requested clearer separation between confirmed requirements, future ideas, and excluded content so later diagrams and screens do not reintroduce removed features. • The relationship between Interested, Going, and actual event registration was not fully resolved. The team will prepare a concrete flow showing external registration and user-visible states. • Privacy options must be consistent across requirements, UI, ERD, UAT, and AI/privacy documentation. Private information must not appear in recommendations or visible activity without permission. • Technical-stack discussion remained provisional because the prototype and data baseline were not mature enough to support a final implementation claim. • The next reviewable baseline will include revised requirements, prototype flows, AI/privacy boundaries, ERD/UAT support, and an ownership register with current evidence links.	AGENDA (and priority) 1. Present the first structured proposal and current scope assumptions (1) 2. Review which social features can be completed during the project period (1) 3. Confirm the boundary of ordinary user-to-user chat (1) 4. Review how Check-in, Events, Friends, and the AI Assistant work together (1) 5. Discuss authorised AI inputs, consent, and safety boundaries (1) 6. Review external event registration and payment boundaries (2) 7. Discuss provisional implementation tools and documentation needs (2) 8. Confirm the next prototype, ERD, UAT, and requirements baselines (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 11:30) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 11:30) • Du Kun - HCI / UI Designer (approx. 11:30) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 11:30) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 11:30)
PARKING LOT • Final Interested / Going / registration relationship. • Final Check-in privacy options. • Confirmed friend- and event-recommendation factors. • Whether weather is real, mocked, or deferred. • Final implementation stack after the baseline review. • How excluded features will be tracked in later documents.	ACTION ITEMS (Owner and deadline) • Update project scope and integrated requirements. (Li Hourui 12 June 2026) • Create the ownership and file-convention list. (Shi Zhengqi 12 June 2026) • Revise the prototype around confirmed modules. (Du Kun 18 June 2026) • Prepare AI/algorithm/privacy requirements. (Zhou Yaoyin 18 June 2026) • Prepare ERD/UAT/backend baseline. (Jin Zihan 18 June 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 18 June 2026)	

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 12/06/2026 - 14:00

MEETING NOTES • The team applied the 5 June Sponsor decision and removed ordinary chat from active requirements, page flows, diagrams, and planned UAT scenarios. • PM and DPM checked each module for duplicated ownership and agreed that one person is accountable for each deliverable while cross-file review remains shared. • Li Hourui owns the integrated plan, meeting records, class/use-case diagrams, Gantt chart, decision tracking, and overall review coordination. • Shi Zhengqi owns Sprint-document refinement, terminology alignment, and support for the final group-report structure. • Du Kun owns the prototype and HCI flow; Zhou Yaoyin owns AI, algorithm, and privacy material; Jin Zihan owns ERD, UAT, backend, and data-support documentation. • The team agreed one file-naming pattern and required every deliverable to label confirmed, proposed, deferred, and excluded content clearly. • The prototype baseline will show Login, Home, Check-in, Events, Friends, and Profile navigation but will be presented as work in progress rather than a final interface. • AI/privacy and ERD/UAT work must be checked against visible UI behaviour so technical documents do not describe fields or flows that users cannot see. • Notion must contain current links, status, owners, decisions, and evidence. Review comments should be closed in the source file instead of creating untracked corrected copies. • The 19 June meeting will use the prototype to confirm the central mechanism, event-state wording, excluded functions, and the next detailed corrections.	AGENDA (and priority) 1. Apply the Sponsor's 5 June scope-reduction decisions (1) 2. Remove ordinary chat from active requirements and UI work (1) 3. Confirm one accountable owner for every project deliverable (1) 4. Agree file names, version labels, and Notion evidence conventions (1) 5. Check overlaps between requirements, UI, AI/privacy, ERD, and UAT (1) 6. Prepare a reviewable prototype and technical baseline (2) 7. Label confirmed, proposed, deferred, and excluded content consistently (2) 8. Confirm the 19 June Sponsor-review structure and speaking responsibilities (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 14:00) • Du Kun - HCI / UI Designer (approx. 14:00) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 14:00) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 14:00)
PARKING LOT • Confirm the Group-feature boundary. • Confirm event-state terminology. • Confirm whether Check-in is the central mechanism. • Check the first prototype against the ownership register. • Review cross-file terminology after the 19 June meeting. • Confirm UAT evidence format and storage.	ACTION ITEMS (Owner and deadline) • Prepare integration checklist and diagram outline. (Li Hourui 18 June 2026) • Refine Sprint 2 documents. (Shi Zhengqi 18 June 2026) • Complete the reviewable prototype baseline. (Du Kun 18 June 2026) • Complete the AI/privacy baseline. (Zhou Yaoyin 18 June 2026) • Complete the ERD/UAT/backend baseline. (Jin Zihan 18 June 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 18 June 2026)	

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 19/06/2026 - 11:30

MEETING NOTES • Du Kun demonstrated the unfinished prototype and walked through Login, Home, Check-in, Events, Friends, and Profile. The purpose was to test the function baseline, not seek approval for visual polish. • Li Hourui redrew parts of the Home and Login experience during the discussion; Shi Zhengqi recorded decisions and Jin Zihan raised data and account-support questions. • Li Hourui proposed Check-in as the system foundation because it can connect current status, friend activity, weather/location context, recommendations, and authorised AI personalisation. • The Sponsor agreed that Check-in could link the main modules, provided privacy and visibility are applied consistently and the system does not imply live tracking. • Interested means a user expresses interest in an event. Going means the user intends to attend; actual registration occurs on an external website rather than inside the app. • The app will not process event payment, guarantee third-party registration, or claim verification of a user's external booking. • Event Details may show social information only when visibility permits it. Aggregate counts can be shown without exposing identities that the viewer is not allowed to access. • Group functions, ordinary user chat, and administrator content-review functions were confirmed as outside the current user-facing scope. • The prototype, requirements, ERD, UAT, and AI/privacy documents must use the same event-state and visibility wording after this meeting. • The team assigned corrections for Home/Login/Event/Check-in screens, Check-in-linked AI inputs, and ERD support for account, event, and visibility states before the next review.	AGENDA (and priority) 1. Demonstrate the initial prototype and main page flow (1) 2. Review Home, Login, Check-in, Events, and Friends interactions (1) 3. Confirm whether Check-in can be the system foundation (1) 4. Clarify Interested, Going, and external event registration (1) 5. Review friend activity and event-participant visibility (1) 6. Confirm the boundary of Group, ordinary chat, and administrator review (1) 7. Check data and login support for the proposed UI (2) 8. Assign prototype, scope, AI/privacy, and ERD corrections (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 11:30) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 11:30) • Du Kun - HCI / UI Designer (approx. 11:30) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 11:30) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 11:30)
PARKING LOT • Final friend-recommendation factors. • Public event counts and participant visibility. • Weather data source and fallback. • Whether Going requires a confirmation after external registration. • Precise versus approximate location wording. • Remove any remaining Group/admin/chat references.	ACTION ITEMS (Owner and deadline) • Update scope register and main diagrams. (Li Hourui 26 June 2026) • Update Sprint terminology. (Shi Zhengqi 26 June 2026) • Revise Home/Login/Event/Check-in screens. (Du Kun 2 July 2026) • Align AI inputs with Check-in and privacy. (Zhou Yaoyin 2 July 2026) • Align ERD with login, Check-in and event states. (Jin Zihan 2 July 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 2 July 2026)	

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 26/06/2026 - 14:00

MEETING NOTES • PM and DPM reviewed the submitted Sprint work and found remnants of Group and administrator functions in files that should have followed the 19 June scope decision. • The team separated accidental scope drift, which can be corrected internally, from unresolved questions that require a clear Sponsor decision. • Interested, Going, Booked externally, and External Registration were used inconsistently across the prototype, requirements, ERD, and UAT material. • Jin Zihan was asked to model event participation so Interested and Going can be represented without implying that the application completes or verifies external registration. • Check-in support for note, mood, activity, approximate location, weather, and visibility required consistent field names and matching UI evidence. • Zhou Yaoyin's AI material was checked for unsupported inference, hidden data access, and claims that exceeded the agreed bounded assistant/recommendation scope. • Friend recommendations must filter unavailable or non-consenting users before any ranking factors are applied. The final factors still require refinement. • Unfinished tasks may move into the following Sprint, but owners must record the reason, new deadline, and effect on the next Sponsor review. • Li Hourui updated the issue list and priorities; Shi Zhengqi converted conflicts into exact Sponsor questions; each technical owner received a correction list. • The 3 July meeting will use specific UI and document examples to confirm Home priorities, friend filters, event visibility, AI context, and weather support.	AGENDA (and priority) 1. Review submitted Sprint 3 requirements, UI, AI/privacy, ERD, and UAT work (1) 2. Identify excluded-scope remnants and inconsistent feature names (1) 3. Align Interested, Going, and external-registration terminology (1) 4. Check Check-in context, event states, and visibility in the ERD (1) 5. Review AI material for unsupported personal-data use or inference (1) 6. Separate internal corrections from questions requiring Sponsor confirmation (2) 7. Review unfinished tasks, roll-over rules, priorities, and risks (2) 8. Prepare exact examples and proposed resolutions for 3 July (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 14:00) • Du Kun - HCI / UI Designer (approx. 14:00) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 14:00) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 14:00)
PARKING LOT • People You May Know factors. • Friend Page filters. • Interested / Going counts and identity visibility. • How AI reads permitted user context. • Whether weather is stored or display-only. • Final Home information priority. • Remaining scope remnants requiring Sponsor confirmation.	ACTION ITEMS (Owner and deadline) • Issue the scope/conflict review list. (Li Hourui 27 June 2026) • Update Sprint records and Sponsor questions. (Shi Zhengqi 1 July 2026) • Correct UI terminology and missing flows. (Du Kun 2 July 2026) • Restrict AI inputs and claims. (Zhou Yaoyin 2 July 2026) • Correct ERD/event/check-in relationships. (Jin Zihan 2 July 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 2 July 2026)	

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 03/07/2026 - 11:30

MEETING NOTES • The team discussed a People You May Know experience that shows an avatar, name, recommendation reason, Detail, and Add Friend without automatically creating a friendship. • The friend-request flow remains consent-based: discover a person, view the permitted public profile, send a request, receive Accept or Decline, and create a friendship only after acceptance. • Friend Page filters may use permitted Check-in status, mood, common Interested events, and common Going events. Hidden or private activity must not be returned. • The Sponsor asked Home to show a smaller set of useful recommendations and recent activity rather than placing every available module on the first screen. • Event Details should distinguish visible friends from other visible users and use aggregate counts when identities cannot be shown under privacy settings. • Interested and Going remain separate user actions. External event registration remains outside the application and must be described clearly in UI and UAT wording. • AI context may use a structured profile concept similar to soul.md / me.md, but only fields authorised by the user may be loaded. • Users must be able to understand and control relevant personalisation data. The design must cover consent, editing, deletion, and safe fallback when context is unavailable. • Weather becomes part of the saved Check-in context and may support friend activity, recommendations, or AI only when the related Check-in data is permitted. • All decisions must be reflected in Home, Friends, Events, Check-in, requirements, ERD, UAT, algorithms, privacy material, and Notion evidence before the internal review.	AGENDA (and priority) 1. Review friend discovery, friend requests, and People You May Know (1) 2. Confirm Friend Page filters and permitted friend activity (1) 3. Simplify Home and prioritise recommendation/activity content (1) 4. Review event Interested / Going states and visible participant counts (1) 5. Discuss structured AI context, consent, editing, and deletion (1) 6. Confirm weather as saved Check-in context (1) 7. Align UI, requirements, ERD, UAT, and algorithm terminology (2) 8. Confirm 10 July submissions and the 11 July internal review (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 11:30) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 11:30) • Du Kun - HCI / UI Designer (approx. 11:30) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 11:30) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 11:30)
PARKING LOT • Final recommendation weights and tie-breaking. • AI persona design and configuration count. • Top-N display rule for Home. • Real versus mock weather source. • Going confirmation after external registration. • Long-term AI-context retention and deletion. • Confirm the next internal review time in Notion.	ACTION ITEMS (Owner and deadline) • Update Sponsor decision register. (Li Hourui 6 July 2026) • Align Sprint 4 and UI terminology. (Shi Zhengqi 10 July 2026) • Update Home, Friends, Events and Check-in UI. (Du Kun 10 July 2026) • Refine AI context/privacy/algorithm documents. (Zhou Yaoyin 10 July 2026) • Add weather and visibility to the data model. (Jin Zihan 10 July 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 10 July 2026)	

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 11/07/2026 - 14:00

MEETING NOTES • The team reviewed the sponsor-meeting whiteboard notes and confirmed that Group is removed from the current scope. Sprint 3 focuses on friend discovery, public profile, friend request consent, event social visibility, AI-supported recommendations, privacy control, and supporting check-in/event experience updates. • The Sprint 3 high-priority functions are Home Page, Check-in, Events, and Friends Visibility. Map / Timeline, Calendar, Heatmap, AI Assistant Entry, AI Safety Boundary, and AI Check-in Support are medium priority. Weather is low priority and should remain a supporting mock/fallback feature. • The Home Page should include a People You May Want to Know module. Each card should show avatar, name, recommendation reason, Detail, and Add Friend. Recommended people should be generated from same interests, approximate region, and shared event interest. • The basic Add Friend workflow is included in Sprint 3: Discover recommended person -> view Public Profile -> send friend request -> receive Accept / Decline decision -> become friends only after consent. Full friend search, advanced rejection/blocking, and group visibility are future considerations. • Friend Page filters should support check-in status, emotion/mood, has interested event, and Going / Booked externally event state. Friends Activity and Friend Page content must display only information permitted by each user's visibility and privacy settings. • Event Details should show interest and attendance-related social signals without overexposing users. Friends who are visible can be shown separately, while other interested users remain aggregate/anonymous unless visibility permits detail access. • All agreed changes must be reflected consistently in the prototype, User Stories, Use Cases, FR/NFR, acceptance criteria, UAT scenarios, ERD, and Notion records. • AI Assistant context design remains based on user prompt + soul.md / soul.json + me.md / me.json + permitted context. The user profile summary must contain only consent-based, feature-relevant data that users can view, edit, or delete. • AI Check-in Support must explicitly state that it can only use data allowed by user consent and privacy settings. AI safety boundaries must include no mental-health inference and no leakage of private profile or private check-in data. • Weather information may appear in the Home Page and Check-in flow as mock weather information. Missing weather data must not block Home Page, Check-in, Event, Friend, or AI-related core functions. • The PM reviewed the current deliverable status. Completed and pending work will continue to be checked in Notion, with a Monday deadline for revised submissions and PM consistency review.	AGENDA (and priority) 1. Review Sprint 3 scope and confirm requirement updates (1) 2. Discuss Home Page, Check-in, Events, Friends Visibility, and feature priorities (1) 3. Align Event Suggestions recommendation order across Home Page User Story and Stage 3 / Stage 4 (1) 4. Discuss friend recommendation, Add Friend consent workflow, and Friend Page filters (1) 5. Review Event Detail social visibility and aggregate interest-count presentation (1) 6. Review AI Assistant context design, AI Check-in Support, and AI safety boundary (2) 7. Review HCI, Task Output, UAT, ERD, PM audit status, and Notion evidence (2) 8. Confirm action items, Monday deadline, and follow-up parking-lot items (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) • Shi Zhengqi - System Analyst / Technical Writer (approx. 14:00) • Du Kun - HCI / UI Designer (approx. 14:00) • Zhou Yaoyin - AI / Recommendation Design / Task Output (approx. 14:00) • Jin Zihan - UAT / ERD (approx. 14:00)
ACTION ITEMS (Owner and deadline) • Final PM review, cross-role consistency check, and Notion completion-status tracking. (Li Hourui 13/07 Monday) • Finalise requirements documentation updates. (Shi Zhengqi 13/07 Monday) • Submit revised HCI / prototype screens. (Du Kun 13/07 Monday) • Submit AI / Task Output package. (Zhou Yaoyin 13/07 Monday) • Submit UAT scenarios and ERD. (Jin Zihan 13/07 Monday) • Update Notion with deliverable links, completion status, and evidence. (All members 13/07 Monday)		

PARKING LOT

- Review Du Kun's revised HCI / prototype after submission.
- Review Zhou Yaoyin's AI / Task Output package after submission.
- Review Jin Zihan's UAT and ERD after submission.
- Confirm final wording and UI distinction between Going and Booked externally.
- Decide whether Weather remains mock-only or requires a clearer future real-data integration note.
- Confirm the next sponsor/team review time in Notion.
- Plan full friend search, advanced rejection/blocking, and expanded friend-request workflows for a future sprint.
- Selected-friend visibility remains outside the current sprint, and group-related features remain removed from the current scope unless later approved.
- Continue using aggregate-only counts for users whose identities are not visible under privacy settings.
- Evaluate long-term AI profile retention, multi-device synchronisation, consent audit trail, and AI-context deletion in a future phase.

(Based on Rodrigo Caetano's template) (<https://rodrigocaetano.com/>)

COMP3851A / COMP3851B

Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 17/07/2026 - 11:30

MEETING NOTES • The Sponsor reviewed AI personality customisation and confirmed that a user can create, edit, delete, and select a persona for the assistant experience. • A persona may contain a name, relationship, personality, preferences, and reply style. Selecting a persona changes response style, not the user's permissions or the assistant's safety boundary. • Where the design displays five personas, this means up to five configurations may be available; only one persona is selected at a time. • Friend recommendations may use confirmed factors such as shared interests, permitted approximate region, common events, and allowed Check-in context after candidate filtering. • Event recommendations may use interests, event history/state, permitted location context, and other confirmed inputs without claiming an unsupported complex machine-learning model. • Recommendation ordering will be deterministic and explainable. Privacy, visibility, consent, and eligibility filtering occur before scores are calculated. • Home must display only the top two permitted items in each recommendation or activity section and provide See All for the remaining permitted set. • The project must not use mental-health inference, hidden private data, precise live location, or non-consenting user data for AI or recommendations. • Model/runtime terminology must be consistent. Sprint 5 material using local Qwen through Ollama must replace older Gemini references where the final architecture has changed. • The team assigned final prototype, Sprint 5, AI/privacy, ERD/backend, report-outline, and cross-document review work for completion before 24 July.	AGENDA (and priority) 1. Review AI persona create, edit, delete, and select interactions (1) 2. Confirm the meaning of the five displayed persona configurations (1) 3. Review friend-recommendation factors and permission filtering (1) 4. Review event-recommendation factors and deterministic ordering (1) 5. Confirm Home Top 2 and See All behaviour (1) 6. Review consent, visibility, data minimisation, and AI safety boundaries (1) 7. Check runtime/model terminology and Qwen / Ollama references (2) 8. Assign final UI, Sprint 5, AI/privacy, and backend alignment work (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 11:30) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 11:30) • Du Kun - HCI / UI Designer (approx. 11:30) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 11:30) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 11:30)
PARKING LOT • Final Qwen / Ollama runtime naming. • External-registration return flow. • Any remaining administrator wording. • Final terminology freeze across all deliverables. • Persona deletion and selected-persona fallback. • Final contribution evidence and report structure. • Final Sponsor-meeting questions.	ACTION ITEMS (Owner and deadline) • Update integrated scope and final-review plan. (Li Hourui 24 July 2026) • Refine Sprint 5 and report outline. (Shi Zhengqi 24 July 2026) • Apply persona and Top 2 changes to UI. (Du Kun 24 July 2026) • Revise AI, algorithms and privacy documents. (Zhou Yaoyin 24 July 2026) • Align backend/ERD with personas and states. (Jin Zihan 24 July 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 24 July 2026)

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 24/07/2026 - 14:00

MEETING NOTES	AGENDA (and priority)	Attendees (and time of arrival)
- The team reviewed Sprint 5 progress and the remaining work across the high-fidelity prototype, project documentation, reports, and video production. - Du Kun submitted the revised high-fidelity prototype after the latest iteration. The PM began reviewing it and is working with Du Kun to correct unclear interactions, inconsistent labels, and screens that do not yet match the agreed Sprint 5 requirements. The prototype will remain under review until the comments are closed. - The PM and DPM planned the work for the group report, individual reports, and video production. The proposed order is to confirm each member's contribution evidence, freeze the reviewed deliverables, prepare the script and recording plan, record the required sections, and complete a final edit and consistency check. - Zhou Yaoyin submitted the revised Sprint 5 AI, recommendation algorithm, and privacy document. The PM completed an initial review and provided changes covering scope clarity, ranking inputs, consent and privacy boundaries, terminology, and links back to the UI and requirements. A revised version is required before final approval. - Jin Zihan submitted the backend specification document. The PM is reviewing the proposed rules, data handling, and state definitions against the Sprint 5 requirements, UI flows, privacy decisions, and related technical documentation. - Shi Zhengqi (DPM) further refined the Sprint 5 documentation and checked it against the UI specification. The current review focuses on keeping feature names, user states, workflow steps, and acceptance expectations consistent across both documents. - Li Hourui (PM) reviewed several deliverables, recorded cross-document issues, and assigned the next round of work. Review comments should be resolved in the source document or prototype rather than handled through separate, untracked copies. - The team agreed that the final week should focus on closing review comments and aligning existing deliverables. No additional feature expansion was approved during this meeting. - All members must keep the latest file or prototype link, review status, and supporting contribution evidence up to date in Notion so the final reports and videos use the same approved material.	- Review Sprint 5 progress and outstanding work (1) - Review the revised high-fidelity prototype (1) - Plan the group report, individual reports, and video production (1) - Review the revised AI, recommendation algorithm, and privacy document (1) - Review the backend specification document (1) - Align Sprint 5 documentation with the UI specification (1) - Confirm cross-deliverable review tasks and next-week deadlines (2)	- Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) - Shi Zhengqi - DPM / Requirements and UI Alignment (approx. 14:00) - Du Kun - HCI / UI Designer (approx. 14:00) - Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 14:00) - Jin Zihan - Backend Specification / Technical Documentation (approx. 14:00)
ACTION ITEMS (Owner and deadline) - Finalise the report outlines, video schedule, and review checklist; track the closure of PM comments. (Li Hourui, 30/07) - Apply the PM's feedback to the high-fidelity prototype and cross-check the affected screens against the Sprint 5 and UI specifications. (Du Kun, 28/07) - Revise the AI, recommendation algorithm, and privacy document; clarify ranking inputs, consent boundaries, terminology, and traceability. (Zhou Yaoyin, 28/07) - Address the backend-specification review comments and align its rules and states with the UI, requirements, ERD, and UAT material. (Jin Zihan, 29/07) - Finalise the Sprint 5 document and complete its cross-check against the UI specification. (Shi Zhengqi, 29/07) - Confirm the video structure, recording order, speaking responsibilities, and required evidence after the deliverables are frozen. (PM and DPM, 30/07) - Prepare contribution evidence, report inputs, and required video material; upload current links and status to Notion. (All members, 30/07)		

PARKING LOT • Confirm the final recording date, expected video length, and editing hand-off. • Resolve any remaining differences in feature names and state labels across the prototype, Sprint 5 document, backend specification, AI/privacy document, ERD, and UAT material. • Confirm the cut-off time for prototype and document changes before report and video production begins. • Carry any unresolved sponsor questions into the preparation for the next sponsor meeting. • Check that Notion contains one clearly identified current version of every final deliverable, together with review evidence and ownership. • Keep additional feature ideas outside the current Sprint 5 completion scope unless they are separately approved.

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 31/07/2026 - 11:30

MEETING NOTES • The Sponsor asked each member to present a concise account of personal contribution supported by current files, review evidence, Notion links, or other traceable project records. • Li Hourui presented project coordination, integration, meeting records, class/use-case diagrams, Gantt planning, final-review coordination, and contribution-evidence consolidation. • Shi Zhengqi presented Sprint-document refinement, requirement and terminology alignment, report-structure support, and the final rubric cross-check for written sections. • Du Kun presented the HCI process and high-fidelity prototype; Zhou Yaoyin presented AI personas, recommendation rules, algorithms, privacy, and consent; Jin Zihan presented ERD, UAT, backend, and data-support work. • The team reviewed each person's final-report section against the rubric, checking whether claims were specific, supported by evidence, connected to project outcomes, and consistent with the shared report. • The high-fidelity walkthrough found an intermittent defect on the Profile page: in some cases the user could not save or change personal interest tags. • A second defect affected some Event records, which displayed incorrect event information or an incorrect state during the final walkthrough. • The remaining reviewed prototype areas and the other members' report sections passed this review, subject only to small wording, reference, and evidence-link corrections. • The team agreed that no new feature work would be added. Du Kun will correct the two visible defects and Jin Zihan will retest the affected scenarios before recording begins. • All owners must close the rubric comments, preserve correction evidence, and use the corrected prototype as the only baseline for the 1 August recording and final submission package.	AGENDA (and priority) 1. Present each member's contribution and supporting evidence to the Sponsor (1) 2. Cross-check every final-report section against the assessment rubric (1) 3. Confirm that contribution statements match the submitted project evidence (1) 4. Complete the final high-fidelity prototype walkthrough (1) 5. Review the intermittent Profile interest-tag editing defect (1) 6. Review the incorrect information shown for some Event records (1) 7. Confirm pass status for all other reviewed prototype and report areas (2) 8. Assign corrections, retesting, recording readiness, and final freeze deadlines (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 11:30) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 11:30) • Du Kun - HCI / UI Designer (approx. 11:30) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 11:30) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 11:30)
PARKING LOT • Capture evidence that Profile interest tags can be changed and saved. • Record the Event cases affected by incorrect information or state. • Close all remaining final-report rubric comments. • Confirm contribution evidence links and file access. • Use the corrected prototype for all recording footage. • Confirm the final file-freeze and recording start time.	ACTION ITEMS (Owner and deadline) • Integrate the contribution evidence and final rubric checklist. (Li Hourui 1 August 2026) • Complete the report-section rubric cross-check. (Shi Zhengqi 1 August 2026) • Correct profile-interest editing and incorrect event display. (Du Kun 1 August 2026) • Verify final AI/privacy claims and contribution evidence. (Zhou Yaoyin 1 August 2026) • Retest both fixes and record final UAT evidence. (Jin Zihan 1 August 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 1 August 2026)

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 01/08/2026 - 10:00

MEETING NOTES • The internal meeting began at 10:00 with a final readiness check covering the prototype build, report files, individual contribution evidence, recording plan, and submission checklist. • Du Kun demonstrated that Profile interest tags could now be changed and saved in the affected flow, and that the previously incorrect Event records displayed the intended information. • Jin Zihan repeated the selected UAT cases for both corrections and recorded the result so the video and report would not rely on an unverified last-minute change. • The team agreed that the one-minute product introduction would explain the user problem, introduce Nexus Five, and state the value of Check-in, event discovery, friend activity, and bounded personalisation in plain language. • Li Hourui coordinated the demonstration order and timing; each owner prepared the exact screen, narration, or evidence needed for the part related to personal contribution. • The final demonstration video was recorded from the frozen prototype. The narration described only functions that were visible and working and did not make unsupported implementation or privacy claims. • Zhou Yaoyin checked the AI, recommendation, consent, and privacy wording used in the introduction and demonstration against the final documentation. • Shi Zhengqi completed a last report/rubric pass while the team checked headings, references, contribution statements, evidence links, filenames, and consistency with the recorded product story. • The team reviewed video playback, audio clarity, screen visibility, duration, and file integrity, then prepared a backup copy and verified that shared links were accessible. • The corrected prototype, final report, contribution evidence, video, UAT evidence, and submission checklist were frozen as the final package, with only blocking packaging errors permitted after this meeting.	AGENDA (and priority) 1. Verify the two final prototype corrections and recorded UAT evidence (1) 2. Confirm the frozen prototype and approved demonstration sequence (1) 3. Record a one-minute introduction to the product and user problem (1) 4. Record the final demonstration video using approved working flows (1) 5. Check narration against the final scope, privacy, and technical wording (1) 6. Review audio, screen visibility, timing, file quality, and playback (1) 7. Complete the report, contribution, rubric, and submission checklist (2) 8. Freeze, back up, and prepare the final package for submission (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 10:00) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 10:00) • Du Kun - HCI / UI Designer (approx. 10:00) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 10:00) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 10:00)
PARKING LOT • Complete final video export and playback verification. • Confirm submission-link permissions in a clean view. • Keep a backup of the frozen report, video, prototype, and evidence. • Record the final submission receipt and timestamp. • Archive the final UAT evidence with the package. • Confirm post-submission archive ownership and access.	ACTION ITEMS (Owner and deadline) • Complete the final package and submission checklist. (Li Hourui 2 August 2026) • Verify the final report and rubric coverage. (Shi Zhengqi 2 August 2026) • Provide the frozen prototype and recording assets. (Du Kun 1 August 2026) • Verify the AI/privacy wording used in the video. (Zhou Yaoyin 1 August 2026) • Archive final UAT evidence and verify package contents. (Jin Zihan 2 August 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 2 August 2026)
