Computing and Information Sciences Work Integrated Learning

Meeting Minutes

*All minutes must be stored in Notion (or similar)

Date / Time: 21/05/2026 - 14:00

MEETING NOTES • The Sponsor introduced the project context, expected deliverables, review process, and the need to keep contribution evidence and current links in Notion or a similar shared workspace. • The initial problem was framed as helping people share day-to-day status, discover relevant events, and connect with others who have similar interests without exposing unnecessary personal information. • The team identified students, newcomers, and community members seeking lightweight social connection as possible users. The final target-user wording remained subject to later Sponsor review. • Initial functional ideas included account access, user profiles, Check-in, friend activity, event discovery, recommendations, and an AI-supported assistant experience. • The team separated functional ideas from non-functional requirements covering privacy, consent, accessibility, usability, responsiveness, maintainability, and safe handling of personal data. • Li Hourui was assigned PM / Scrum coordination and integration work; Shi Zhengqi became DPM and documentation support; Du Kun took UI/HCI; Zhou Yaoyin took AI, algorithms, and privacy; Jin Zihan took ERD, UAT, and backend documentation. • Agile / Scrum was selected because the broad first idea needed short cycles of clarification, prototype review, Sponsor feedback, and cross-document correction. • The team agreed that early ideas must be recorded as proposed rather than approved until they are confirmed in a Sponsor meeting or a reviewed project document. • Each owner must maintain a current file, completion status, and evidence of work so later reports do not rely on untracked copies or unsupported contribution claims. • The first internal meeting will consolidate the workshop output, remove repetition, identify risks, and prepare focused Sponsor questions rather than presenting the initial idea as a frozen scope.	AGENDA (and priority) 1. Introduce the Sponsor, team members, roles, and communication approach (1) 2. Clarify the project problem, intended users, and expected value (1) 3. Discuss the initial account, profile, check-in, event, friend, and AI ideas (1) 4. Separate functional requirements from non-functional requirements (1) 5. Discuss privacy, consent, usability, maintainability, and safety expectations (1) 6. Confirm Agile / Scrum working method and evidence storage (2) 7. Assign first research, requirements, UI, AI/privacy, and data tasks (2) 8. Confirm the first internal consolidation meeting and open questions (2)	Attendees (and time of arrival) • Li Hourui - PM / Scrum Master / Review Lead (approx. 14:00) • Shi Zhengqi - DPM / Requirements and Documentation (approx. 14:00) • Du Kun - HCI / UI Designer (approx. 14:00) • Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 14:00) • Jin Zihan - ERD / UAT / Backend Documentation (approx. 14:00)
PARKING LOT • Confirm the final application name. • Confirm the final target-user wording. • Decide which early social functions are core or future work. • Confirm exact AI capability and allowed data sources. • Confirm event-registration responsibility. • Record Sponsor communication and review cadence in Notion.	ACTION ITEMS (Owner and deadline) • Consolidate workshop notes and first proposal. (Li Hourui 29 May 2026) • Structure initial requirements and Sprint records. (Shi Zhengqi 29 May 2026) • Draft initial page structure and user flows. (Du Kun 3 June 2026) • Research AI boundaries and privacy needs. (Zhou Yaoyin 3 June 2026) • Identify core entities and login/data needs. (Jin Zihan 3 June 2026) • Update Notion with current links, completion status, review evidence, and contribution records. (All members 3 June 2026)
