| <b>MEETING NOTES</b> <ul style="list-style-type: none"><li>• The team discussed a People You May Know experience that shows an avatar, name, recommendation reason, Detail, and Add Friend without automatically creating a friendship.</li><li>• The friend-request flow remains consent-based: discover a person, view the permitted public profile, send a request, receive Accept or Decline, and create a friendship only after acceptance.</li><li>• Friend Page filters may use permitted Check-in status, mood, common Interested events, and common Going events. Hidden or private activity must not be returned.</li><li>• The Sponsor asked Home to show a smaller set of useful recommendations and recent activity rather than placing every available module on the first screen.</li><li>• Event Details should distinguish visible friends from other visible users and use aggregate counts when identities cannot be shown under privacy settings.</li><li>• Interested and Going remain separate user actions. External event registration remains outside the application and must be described clearly in UI and UAT wording.</li><li>• AI context may use a structured profile concept similar to soul.md / me.md, but only fields authorised by the user may be loaded.</li><li>• Users must be able to understand and control relevant personalisation data. The design must cover consent, editing, deletion, and safe fallback when context is unavailable.</li><li>• Weather becomes part of the saved Check-in context and may support friend activity, recommendations, or AI only when the related Check-in data is permitted.</li><li>• All decisions must be reflected in Home, Friends, Events, Check-in, requirements, ERD, UAT, algorithms, privacy material, and Notion evidence before the internal review.</li></ul> | <b>AGENDA (and priority)</b> <ol style="list-style-type: none"><li>1. Review friend discovery, friend requests, and People You May Know (1)</li><li>2. Confirm Friend Page filters and permitted friend activity (1)</li><li>3. Simplify Home and prioritise recommendation/activity content (1)</li><li>4. Review event Interested / Going states and visible participant counts (1)</li><li>5. Discuss structured AI context, consent, editing, and deletion (1)</li><li>6. Confirm weather as saved Check-in context (1)</li><li>7. Align UI, requirements, ERD, UAT, and algorithm terminology (2)</li><li>8. Confirm 10 July submissions and the 11 July internal review (2)</li></ol> | <b>Attendees (and time of arrival)</b> <ul style="list-style-type: none"><li>• Li Hourui - PM / Scrum Master / Review Lead (approx. 11:30)</li><li>• Shi Zhengqi - DPM / Requirements and Documentation (approx. 11:30)</li><li>• Du Kun - HCI / UI Designer (approx. 11:30)</li><li>• Zhou Yaoyin - AI / Algorithm / Privacy Lead (approx. 11:30)</li><li>• Jin Zihan - ERD / UAT / Backend Documentation (approx. 11:30)</li></ul> |
| <b>PARKING LOT</b> <ul style="list-style-type: none"><li>• Final recommendation weights and tie-breaking.</li><li>• AI persona design and configuration count.</li><li>• Top-N display rule for Home.</li><li>• Real versus mock weather source.</li><li>• Going confirmation after external registration.</li><li>• Long-term AI-context retention and deletion.</li><li>• Confirm the next internal review time in Notion.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>ACTION ITEMS (Owner and deadline)</b> <ul style="list-style-type: none"><li>• Update Sponsor decision register. (Li Hourui 6 July 2026)</li><li>• Align Sprint 4 and UI terminology. (Shi Zhengqi 10 July 2026)</li><li>• Update Home, Friends, Events and Check-in UI. (Du Kun 10 July 2026)</li><li>• Refine AI context/privacy/algorithm documents. (Zhou Yaoyin 10 July 2026)</li><li>• Add weather and visibility to the data model. (Jin Zihan 10 July 2026)</li><li>• Update Notion with current links, completion status, review evidence, and contribution records. (All members 10 July 2026)</li></ul>                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                      |
