

Sprint 4.5 — Final Consolidated Member B Incremental Requirements Package

Traceability note: Legacy S5-prefixed identifiers are retained from the document’s former naming. This document is Sprint 4.5, not the current Sprint 5.

1. Sprint 4.5 Incremental Scope Summary

Sprint 4.5 is an incremental update. This package consolidates only the Added, Modified, and Removed Sprint 4.5 requirements. Where a Sprint 4.5 requirement conflicts with an earlier Sprint, Sprint 4.5 takes precedence. Confirmed business outcomes are preserved while repeated descriptions across artefacts are merged.

PARTIALLY OUTDATED — Only the Gemini-specific wording is superseded by Sprint 5 NIS-CH01, NIS-CH02, NIS-AC01–NIS-AC07, and NIS-FR01–NIS-FR10. The remaining scope or responsibility boundary is still applicable under Qwen Local Model Adapter and Ollama.

Member B defines business outcomes, privacy and scope boundaries, User Stories, Acceptance Criteria, Use Case changes, FR/NFR, Business Rules, and cross-team responsibilities. Detailed UI design, ranking formulas, database structures, APIs, implementation code, Gemini prompts, and testing remain outside this package.

2. Consolidated Incremental Change Register

Change ID	Feature Area	Change Type	Consolidated Sprint 4.5 Change
S5-CH01	Initial Privacy and Check-in	Added and Modified	Add initial Privacy Settings after the Landing Page. Accept saves Public and Reject saves Private; either result permits application access. Friends-only is available only through Settings. Check-in displays the current saved state as read-only and applies it automatically. No separate location-sharing switch is introduced.
S5-CH02	Weather Persistence	Modified	Store weather with, or link it to, the relevant Check-in and apply the same access boundary as the Check-in.

S5-CH0 3	Event Participation and Going	Added, Modified, and Removed	Retain Interested, add a separate Going box and Going People List, remove the independent Booked externally UI, preserve the unified Going / Booked state, relocate External Registration, add its return confirmation, and support Mark Going and Unmark Going.
S5-CH0 4	Homepage and Friends Activity	Modified	Use Event Recommendation as the formal module name, show Top 2 and See All for all three Homepage modules, use one complete Friends Activity result, place Friends Activity after Check-in, and reuse the Event List Event box.
S5-CH0 5	Special Care and Search My Friends	Added and Modified	Add private Special Care toggling for established friends, prioritise Special Care Friends on the Friend Page, use Special Care only as a Friends Activity ranking factor, and provide Search My Friends by friend name.
S5-CH0 6	Add Friend / Find People	Added	Add a separate Add Friend / Find People page for searching platform users, viewing permitted Profile information, and sending valid Friend Requests.
S5-CH0 7	AI Customize and Persona Management	Added, Modified, and Removed	Add a current-customisation summary, Persona Management, Persona actions, deletion confirmation, and a maximum of five Personas. Remove Tone Presets.

3. Consolidated User Stories and Acceptance Criteria

S5-US01 — Configure Privacy and Perform Check-ins

Change Type: Added and Modified

User Story

As a user, I want the application to establish and automatically apply my saved Check-in privacy state so that I can continue using the application without repeatedly configuring privacy.

Acceptance Criteria

- **S5-AC01:** After the Landing Page, the system shall display initial Privacy Settings containing privacy content and Accept and Reject only.
- **S5-AC02:** Accept shall save Public, Reject shall save Private, and either result shall allow continued application access. Friends-only shall be selectable only through Settings after entry.
- **S5-AC03:** Settings shall allow Public, Friends-only, and Private.
- **S5-AC04:** Check-in shall display the current saved privacy state as read-only, provide no privacy editing, and automatically apply that state to later Check-ins until Settings changes it.
- **S5-AC05:** No independent location enabled, location disabled, or location-sharing toggle shall exist.
- **S5-AC06:** Private shall continue recording permitted location information but restrict access to the owner.
- **S5-AC07:** Check-in location shall remain approximate and shall exclude precise coordinates, unrestricted GPS, continuous tracking, background tracking, and live tracking.

S5-US02 — Retrieve Check-in Weather

Change Type: Modified

User Story

As a user, I want weather associated with a Check-in to remain available with that Check-in so that its weather context can be retrieved later.

Acceptance Criteria

- **S5-AC08:** Weather shall be stored with, or linked to, the relevant Check-in.
- **S5-AC09:** Weather retrieval shall follow the same access boundary as the related Check-in.

S5-US03 — Manage Interested and Going

Change Type: Added, Modified, and Removed

User Story

As a user, I want to manage Interested and Going as separate Event states, including confirming external registration and changing Going, so that my current event intention is represented accurately.

Acceptance Criteria

- **S5-AC10:** The existing Interested box shall remain, and Event Details shall add a separate Going box using independent users, data, friend counts, and total counts.

- **S5-AC11:** The Going box and Going People List shall inherit the current Interested preview, click-through, complete-people-list, friend-first-ordering, and visibility-filtered-count behaviour. UI/UX shall determine whether the box appears beside or below Interested.
- **S5-AC12:** Interested actions shall use no additional confirmation page, dialog, or step. Interested and Going shall not automatically change each other.
- **S5-AC13:** Independent Booked externally buttons, filters, labels, and user-visible options shall be removed, while the unified Going / Booked state, current and historical data, persistence, and approved recommendation and Friends Activity uses remain.
- **S5-AC14:** Going shall be the only user-visible name. If booked remains an internal or legacy technical name, it shall represent the same state. Legacy Booked count and shared Booked activity shall mean Going count and shared Going activity.
- **S5-AC15:** External Registration shall move to the former Booked externally position and continue opening the approved third-party registration or booking page.
- **S5-AC16:** After the user returns, the system shall show Yes and No. Yes shall perform Mark Going; No shall leave the Event unchanged. Link opening, browser launch, return, or elapsed time shall not prove completion.
- **S5-AC17:** Mark Going and Unmark Going shall update the Going People List, Going counts, Going box, Friends Activity data, and recommendation data. They shall not add cancellation confirmation, expiry, temporary status, penalties, reason fields, refund handling, or attendance verification.

S5-US04 — View Ranked Homepage Content

Change Type: Modified

User Story

As a user, I want consistent Top 2 and See All results for Homepage recommendations and Friends Activity so that prioritised and complete results remain aligned.

Acceptance Criteria

- **S5-AC18:** The formal module names shall be Friend Recommendation, Event Recommendation, and Friends Activity. Friend Recommendation may display People You May Want To Know in the UI.
- **S5-AC19:** Each module shall show the first two items from its complete ordered result and provide See All. If fewer than two valid items exist, all available items shall be displayed.
- **S5-AC20:** Homepage Top 2 shall equal the first two items in the corresponding See All result.
- **S5-AC21:** Friends Activity shall appear after Check-in and use one visibility-filtered candidate set containing permitted activities from Special Care and ordinary friends.
- **S5-AC22:** Special Care shall be a ranking factor, not a filter or guaranteed position. Ordinary-friend activity may enter Top 2 or rank above Special Care Friend activity.

- **S5-AC23:** Friends Activity ranking shall consider at least Special Care status, publication time, and time decay or recency decay. This package shall not define formulas, weights, normalisation, decay curves, or tie-breaking.
- **S5-AC24:** The UI shall not independently reorder results or create fixed Special Care and ordinary-friend groups. Homepage shall use the Event List Event box and shall not retain a Homepage-specific Event box.

S5-US05 — Manage Special Care and Search My Friends

Change Type: Added and Modified

User Story

As a user, I want to manage Special Care Friends and search my current friends so that important friends are prioritised and established friends can be located efficiently.

Acceptance Criteria

- **S5-AC25:** Each established friend in the Friend List shall have one Special Care button used to set and remove Special Care.
- **S5-AC26:** Special Care shall remain invisible to the selected friend, send no notification, have no quantity limit, require no friend approval, create no reciprocal status, and have no automatic expiry.
- **S5-AC27:** Special Care Friends shall appear before ordinary friends on the Friend Page but shall not affect Friend Recommendation.
- **S5-AC28:** Search My Friends shall be available on the Friend Page and shall search established friends using friend name only.
- **S5-AC29:** Search My Friends shall not return non-friends or search email, region, interests, Check-in information, or Event activity.
- **S5-AC30:** No match shall produce an empty state, and clearing the search shall restore the complete Friend List.
- **S5-AC31:** Search My Friends shall remain separate from Add Friend Search.

S5-US06 — Find People and Send Friend Requests

Change Type: Added

User Story

As a user, I want to search platform users and send valid Friend Requests so that I can connect with people who are not already my friends.

Acceptance Criteria

- **S5-AC32:** The Friend Page shall provide an Add Friend icon in the top-right area that opens a separate Add Friend / Find People page.
- **S5-AC33:** Add Friend Search shall search platform users by user name, account identifier, or unique username and may return non-friends.

- **S5-AC34:** Results shall allow permitted Profile viewing through the existing Profile viewer and Friend Request sending where eligible.
- **S5-AC35:** Search and Profile access shall follow the target user's existing Profile visibility.
- **S5-AC36:** The system shall prevent requests to the current user, established friends, and users for whom a current valid request already exists.
- **S5-AC37:** Sending a Friend Request shall not itself establish friendship. Add Friend Search shall remain separate from Search My Friends in page, input, result set, and purpose.

S5-US07 — Manage AI Personas

Change Type: Added, Modified, and Removed

User Story

As a user, I want to view and manage my AI Personas so that I can maintain and deliberately select an approved customisation.

Acceptance Criteria

- **S5-AC38:** AI Customize shall display a concise current-customisation summary, relevant context and guidance, and a Settings button opening Persona Management.
- **S5-AC39:** Persona Management shall display all current-user Personas using boxes with the same size and structure.
- **S5-AC40:** Each Persona shall provide Delete, Edit, and Choose, and the page shall provide Confirm at the bottom.
- **S5-AC41:** Choose shall make a pending selection; Confirm shall complete the final choice.
- **S5-AC42:** Delete shall require secondary confirmation. Confirming shall delete the Persona; cancelling shall leave it unchanged.
- **S5-AC43:** Edit shall use only configuration defined or approved by the AI team.
- **S5-AC44:** A user shall have at most five created Personas. The system shall prevent a sixth and provide clear feedback without paid expansion, administrator exceptions, or temporary additional Personas. Tone Presets shall be removed completely.

4. Consolidated Use Case Changes

4.1 Added or Consolidated Sprint 4.5 Use Cases

S5-UC01 — Configure Initial Privacy Settings

Primary Actor: User

Preconditions

- The user has progressed beyond the Landing Page.
- Initial Privacy Settings have not been completed.

Trigger

- The system opens initial Privacy Settings.

Main Flow

1. The system displays the privacy content with Accept and Reject.
2. The user selects Accept.
3. The system saves Public and allows application entry.
4. Later Check-ins automatically use Public until Settings changes it.

Alternative Flow — Reject

1. The user selects Reject.
2. The system saves Private and allows application entry.
3. Later Check-ins automatically use Private until Settings changes it.

Postconditions

- Public or Private is saved.
- Friends-only remains available through Settings.
- Check-in applies the saved state automatically.

Boundary

- No location-sharing switch or per-Check-in privacy selection is added.

S5-UC02 — Manage Event Participation

Primary Actor: User

Supporting Actor: External Registration Website

Preconditions

- The user can access Event Details.

Trigger

- The user selects Interested, Mark Going, Unmark Going, or External Registration.

Main Flow — Mark Going

1. The user selects Going.
2. The system records the unified Going / Booked state using Going as the user-visible term.
3. The system updates the Going People List, counts, Going box, Friends Activity, and recommendation data.
4. Interested remains unchanged.

Alternative Flow A — Unmark Going

1. The user selects Unmark Going.
2. The system removes the current Going state and updates current Going information.
3. Historical handling follows the retained unified state model.

Alternative Flow B — External Registration

1. The system opens the approved third-party page.
2. The user returns to the application.
3. The system asks whether registration or booking was completed.
4. Yes performs Mark Going.
5. No leaves the Event unchanged.

Alternative Flow C — Interested

1. The user selects Interested.
2. The system completes the action without additional confirmation.
3. Going remains unchanged.

Postconditions

- Interested and Going reflect the user's latest independent choices.

Boundary

- The application does not verify, process, cancel, or refund third-party registration or payment.

S5-UC03 — Manage Special Care and Search My Friends

Primary Actor: User

Preconditions

- The user can access the Friend Page.

Trigger

- The user selects a Special Care button or enters a friend name in Search My Friends.

Main Flow — Special Care

1. The user selects an established friend's Special Care button.
2. The system sets or removes Special Care using the same button.
3. The Friend Page places Special Care Friends before ordinary friends.
4. The designation remains private and receives Friends Activity ranking consideration only.

Alternative Flow — Search My Friends

1. The user enters a friend name.
2. The system searches established friends only.
3. Matching friends are displayed under existing Profile visibility.
4. Clearing the search restores the complete Friend List.

Alternative Flow — No Match

- The system displays an empty state.

Postconditions

- Special Care or search results reflect the user's current action.
- Friend Recommendation remains unaffected.

S5-UC04 — Find People and Send a Friend Request

Primary Actor: User

Preconditions

- The user can access the Friend Page.

Trigger

- The user selects the Add Friend icon.

Main Flow

1. The system opens Add Friend / Find People.
2. The user searches by user name, account identifier, or unique username.
3. The system searches platform users and applies Profile visibility.
4. The user views permitted information through the existing Profile viewer.
5. The user sends a Friend Request to an eligible target.
6. The system creates one current valid request.

Alternative Flows

- Self-result: no request is allowed.
- Established friend: no request is allowed.
- Existing active request: no duplicate request is created.
- No result: an empty state is displayed.

Postconditions

- An eligible target receives a Friend Request.
- Friendship is not established until the existing acceptance process completes.

S5-UC05 — Manage Personas

Primary Actor: User

Preconditions

- The user can access AI Customize.

Trigger

- The user opens Persona Management.

Main Flow

1. The system displays all created Personas.
2. The user selects Choose for a Persona.
3. The system records a pending choice.
4. The user selects Confirm.
5. The system completes the Persona selection.

Alternative Flow A — Edit

- The user edits only approved Persona configuration.

Alternative Flow B — Delete

1. The user selects Delete.
2. The system requests secondary confirmation.
3. Confirmation deletes the Persona; cancellation leaves it unchanged.

Alternative Flow C — Maximum Reached

- When five Personas exist, the system prevents creation of a sixth and displays clear feedback.

Postconditions

- Selection, editing, deletion, and creation-limit results reflect the completed action.

4.2 Modified Existing Use Cases

Existing Use Case	Change Type	Sprint 4.5 Incremental Modification
S2-UC10 — Perform Check-in	Modified	Remove Check-in privacy editing, display the saved state as read-only, apply it automatically, preserve approximate-location boundaries, and associate weather with the Check-in.

S2-UC23 — View Event Details	Modified	Retain Interested; add the separate Going box and Going People List; use Going-only UI terminology; remove independent Booked externally UI; relocate External Registration; and provide Mark and Unmark Going.
S2-UC24 — Mark Event as Interested	Modified	Remove additional Interested confirmation and keep Interested independent from Going.
S3-UC04 — View and Filter Friend Page	Modified	Remove the Booked externally filter; add Special Care priority, Search My Friends, and the Add Friend entry.
N/A	Modified	Display Top 2 and See All for Homepage modules, move Friends Activity after Check-in, use one Friends Activity result, and reuse the Event List Event box.
N/A	Modified	Add the AI customisation summary, Persona Management, Persona limits, and removal of Tone Presets.

4.3 Removed Existing Steps or Actions

Removed Item	Affected Existing Flow	Sprint 4.5 Removal
Check-in privacy selection	S2-UC10	Remove editable Public, Friends-only, and Private controls and per-Check-in confirmation.
Separate location-sharing state	N/A	Remove location enabled, location disabled, and independent location-sharing toggle requirements.
Independent Booked externally UI	S2-UC23	Remove its button, option, label, and separate presentation without deleting the unified business state or data.
Independent Booked externally filter	S3-UC04	Remove the Friend Page filter.

Independent Booked externally Friends Activity presentation	N/A	Use Going for the unified state.
Old External Registration placement	S2-UC23	Remove the old or duplicate position after relocation.
Interested confirmation	S2-UC24	Remove the additional confirmation page, dialog, or step.
Homepage-specific Event box	N/A	Replace it with the Event List Event box.
Special Care-only Friends Activity filtering and fixed groups	N/A	Use one complete candidate set and ordered result.
Tone Presets	N/A	Remove Tone Presets and their related actions and references.

5. Consolidated Functional and Non-Functional Requirements

5.1 Functional Requirements

Requirement ID	Change Type	Requirement
S5-FR01	Added	The system shall display initial Privacy Settings after the Landing Page with Accept and Reject only.
S5-FR02	Added	Accept shall save Public, Reject shall save Private, and both shall allow application entry. Friends-only shall be available through Settings only.
S5-FR03	Modified	Settings shall support Public, Friends-only, and Private. Check-in shall display the saved state as read-only and apply it automatically.
S5-FR04	Removed and Modified	No independent location-sharing switch shall exist. Private shall retain permitted location but restrict it to the owner.

S5-FR05	Modified	Check-in location shall remain approximate and exclude precise, unrestricted, continuous, background, and live tracking.
S5-FR06	Modified	Weather shall be stored with or linked to its Check-in and retrieved under the same access boundary.
S5-FR07	Modified	Event Details shall retain Interested and add a separate Going box using independent users, data, and counts.
S5-FR08	Added	Going shall inherit the current Interested preview, click-through, complete-list, friend-first-ordering, and visibility-filtered-count behaviour.
S5-FR09	Removed	Interested shall use no additional confirmation page, dialog, or step.
S5-FR10	Removed and Modified	Independent Booked externally UI shall be removed while the unified Going / Booked state, data, history, persistence, and approved uses remain.
S5-FR11	Modified	Going shall be the only user-visible term; any internal booked name shall represent the same state.
S5-FR12	Modified	Legacy Booked count and shared Booked activity shall correspond to Going count and shared Going activity.
S5-FR13	Modified	External Registration shall move to the former Booked externally position and retain its third-party redirect purpose.
S5-FR14	Added	Returning from External Registration shall display Yes and No. Yes shall Mark Going; No shall leave the Event unchanged.
S5-FR15	Added	Link opening, browser launch, return, or elapsed time shall not automatically create Going.

S5-FR16	Added	Mark Going and Unmark Going shall update the Going People List, counts, Going box, Friends Activity, and recommendation data without changing Interested.
S5-FR17	Modified	The Homepage shall use Friend Recommendation, Event Recommendation, and Friends Activity as the formal module names.
S5-FR18	Modified	Each Homepage module shall show the first two items from its complete ordered result and provide See All.
S5-FR19	Modified	Homepage Top 2 shall equal the corresponding See All first two items; fewer available items shall all be displayed.
S5-FR20	Modified	Friends Activity shall appear after Check-in and use one visibility-filtered candidate set containing permitted Special Care and ordinary-friend activity.
S5-FR21	Modified	Friends Activity ranking shall consider Special Care status, publication time, and time decay or recency decay.
S5-FR22	Modified	The UI shall not independently reorder algorithm results or create fixed friend groups.
S5-FR23	Modified	Homepage shall use the Event List Event box and shall not retain a separate Homepage-specific Event box.
S5-FR24	Added	Each established friend shall have one Special Care button used to set and remove the designation.
S5-FR25	Added	Special Care shall remain private, send no notification, have no limit, require no approval, create no reciprocal status, and have no expiry.
S5-FR26	Added and Modified	Special Care Friends shall appear first on the Friend Page, shall not affect Friend Recommendation, and shall receive Friends Activity ranking consideration only.

S5-FR27	Added	Search My Friends shall search established friends by friend name only, provide empty and cleared states, and exclude non-friends and other Profile or activity fields.
S5-FR28	Added	The Friend Page shall provide an Add Friend icon opening a separate Add Friend / Find People page.
S5-FR29	Added	Add Friend Search shall search platform users by user name, account identifier, or unique username and may return non-friends.
S5-FR30	Added	Add Friend results shall use existing Profile visibility and the existing Profile viewer.
S5-FR31	Added	The system shall prevent self-requests, requests to established friends, and duplicate current valid requests. Sending a request shall not establish friendship.
S5-FR32	Added	AI Customize shall display the current-customisation summary, context, guidance, and a Settings entry to Persona Management.
S5-FR33	Added	Persona Management shall display all Personas and provide Delete, Edit, Choose, and Confirm.
S5-FR34	Added	Choose shall create a pending selection, Confirm shall complete it, and Delete shall require secondary confirmation.
S5-FR35	Added	Edit shall use only AI-team-approved configuration. A user shall have at most five Personas, and creation of a sixth shall be prevented with clear feedback.
S5-FR36	Removed	Tone Presets shall not remain as a function, Persona option, or fallback customisation.

5.2 Non-Functional Requirements

Requirement ID	Change Type	Requirement
----------------	-------------	-------------

S5-NFR01	Modified	Saved privacy and the Check-in read-only display should remain consistent.
S5-NFR02	Modified	Stored weather should remain consistently associated with the correct Check-in.
S5-NFR03	Modified	Homepage Top 2 and See All should preserve the same applicable ordering.
S5-NFR04	Added	Going terminology should remain consistent across all user-visible Event, activity, recommendation, and history views.
S5-NFR05	Added	Special Care and restricted Profile information should remain protected from unauthorised disclosure.
S5-NFR06	Added	Privacy choices, Yes / No confirmation, request eligibility, Persona deletion, and maximum-limit states should be clearly distinguishable to the user.

6. Consolidated Business Rules and Scope Boundaries

6.1 Business Rules

Rule ID	Business Rule
S5-BR 01	Initial Accept produces Public, initial Reject produces Private, and Friends-only is available only through Settings.
S5-BR 02	Check-in uses the saved privacy state automatically. Private restricts permitted location to the owner but does not remove it or disable location.
S5-BR 03	Interested and Going are independent states with independent social data.
S5-BR 04	Going inherits the existing Interested social-display behaviour but remains a separate box and people list.
S5-BR 05	Going and booked represent one business state; Going is the user-visible name.

- S5-BR 06 External Registration requires the user's Yes / No declaration after returning; the external link does not prove completion.
- S5-BR 07 Mark Going and Unmark Going update current Going information without automatically changing Interested.
- S5-BR 08 Each Homepage Top 2 is the first two items from the same complete result shown in See All.
- S5-BR 09 Friends Activity uses one permitted candidate set. Special Care is a ranking factor only and does not guarantee Top 2.
- S5-BR 10 Special Care is private, unlimited, non-reciprocal, requires no approval, does not expire, prioritises the Friend Page, and does not affect Friend Recommendation.
- S5-BR 11 Search My Friends and Add Friend Search are separate functions with separate candidate sets and purposes.
- S5-BR 12 Add Friend Search follows Profile visibility and cannot create self, established-friend, or duplicate active requests. Sending a request does not establish friendship.
- S5-BR 13 Choose precedes Confirm, Persona deletion requires secondary confirmation, and each user is limited to five created Personas.
- S5-BR 14 Tone Presets are removed from the current AI customisation scope.

6.2 Scope Notes and Privacy Boundaries

Scope Note ID	Scope Boundary
S5-SN01	Sprint 4.5 adds no precise coordinates, unrestricted GPS, continuous tracking, background tracking, or live tracking.
S5-SN02	Weather requirements do not define database fields, collections, formats, APIs, or storage technology.
S5-SN03	UI/UX determines Going-box placement. No in-app booking, payment, cancellation, refund, attendance verification, or automatic external verification is added.

PARTIALLY OUTDATED — Only the Gemini-specific wording is superseded by Sprint 5 NIS-CH01, NIS-CH02, NIS-AC01–NIS-AC07, and NIS-FR01–NIS-FR10. The remaining scope or responsibility boundary is still applicable under Qwen Local Model Adapter and Ollama.

- S5-SN04 Ranking formulas, weights, normalisation, decay curves, tie handling, and Gemini implementation remain AI / Algorithm responsibilities.
- S5-SN05 Exact search matching, case sensitivity, fuzzy matching, debounce, account-identifier format, and result ranking are not defined.
- S5-SN06 Persona configuration fields require AI-team approval. Persona deletion adds no recovery, archive, soft deletion, or automatic replacement.
- S5-SN07 This package does not require an internal booked database field to be renamed.
- S5-SN08 Detailed UI layout, APIs, database design, frameworks, implementation code, and testing are outside this package.

7. Cross-Team Handoff

7.1 Member B / Business Analyst

Member B maintains:

- consolidated Sprint 4.5 business requirements;
- User Stories, Acceptance Criteria, Use Case changes, FR/NFR, and Business Rules;
- privacy, Going / Booked, Special Care, friend-search, Persona, and scope boundaries;

7.2 UI/UX

UI/UX shall implement:

- initial Privacy Settings and read-only Check-in privacy;
- separate Interested and Going presentation;
- Going-only terminology, External Registration return confirmation, and Mark / Unmark Going;
- Top 2, See All, Friends Activity placement, unified result presentation, and shared Event box;
- Special Care controls, Search My Friends, and Add Friend / Find People;
- AI summary, Persona Management actions, deletion confirmation, and maximum-five feedback;
- removal of Booked externally UI, Interested confirmation, Homepage-specific Event box, fixed Friends Activity groups, and Tone Presets.

UI/UX shall not independently reorder algorithm outputs.

7.3 AI / Algorithm

AI / Algorithm shall:

- order Friend Recommendation and Event Recommendation;
- rank one complete Friends Activity candidate set;
- include Special Care status, publication time, and time decay or recency decay;
- define formulas, weights, normalisation, decay, and tie handling;
- treat legacy Booked count and shared Booked activity as Going data;
- define approved Persona configuration and Persona effects on AI responses.

Special Care shall not affect Friend Recommendation.

7.4 Backend

Backend shall implement:

- privacy persistence and automatic Check-in application;
- Check-in weather persistence and access;
- unified Going / Booked persistence, Going People List, counts, return confirmation, and Mark / Unmark updates;
- consistent Top 2 and See All retrieval and Friends Activity ranking inputs;
- Special Care persistence and confidentiality;
- separate Search My Friends and Add Friend searches;
- Profile-visibility enforcement and Friend Request restrictions;
- Persona persistence, selection, editing, deletion confirmation, and maximum-five enforcement;
- removal of obsolete Booked externally UI support and Tone Preset support.
